fit | OC-Auto FIT-CHEK

Colorectal cancer is treatable as long as it is detected early.

Prevention is the best strategy for staying healthy.

NON-INVASIVE METHOD for early detection of colorectal cancer.

Convenient. Fast. Safe.

Colorectal cancer is treatable as long as it is detected early.

OC-Auto FIT-CHEK™ is a **NON-INVASIVE** method that does not require prior preparation, special diet, intestinal lavage, nor hospitalization. The sample can be collected at any time from the comfort of your home

**90% OF THE CASES HAVE CURE, IF IT IS DETECTED EARLY.**

Signs and symptoms:

» Usually appear in advanced stages.
» Changes in bowel habits (diarrhea, constipation, thinness)
» Bleeding, dark stools, blood in stool.
» Abdominal colic
» Need to defecate that does not disappear after doing so..

Technology based on the immunological screening method for hemoglobin in stool, that allows for a timely, rapid, and economic detection of CRC, before symptoms appear, decreasing the mortality rate and avoiding false negatives or false positive results.

Lower digestive system

Important facts

It is the **3rd most common cancer** in the world & the 4th most common cause of death. **It is the 4th most frequent type of cancer in Mexico.**

In Mexico it represents the 2nd cause of death associated with cancer. It originates in the rectum or colon, with the growth of a non-cancerous tumor.

This precancerous phase is **totally asymptomatic, but detectable. 90 out of every 100 people survive** after being diagnosed in the early stages.

70% of those affected **go to consultation when the disease is irreversible.**
